

Remote Virtual Training Session Gets Surface NMR System Up and Running Quickly in Algeria

Vista Clara has been a pioneer in delivering remote video-based training and customer support, even before the Covid-19 pandemic.

Here is a prime example of how our virtual training capabilities, in conjunction with localized professional representatives, can make all the difference for getting end customers up and running quickly and smoothly.

Working with our Algeria representative, IMTRADE Scientific & Industrial Solutions, Vista Clara geophysical experts provided remote training for setting up and using one of our GMR Surface-based Magnetic Resonance tools for use by the Laboratory of Underground Oil, Gas and Aquifer Resources at the University of Ouargla in Southern Algeria.

Sales are Accelerating for Vista Clara's Dart Highly Portable, Go-Anywhere NMR Logging Solutions

As we move into 2021 and many organizations shift back toward more normal operations, Vista Clara has been seeing a significant wave of new activity across the board. In particular, the usage of our Dart highly portable magnetic resonance logging tools have accelerated.

The Dart™ is the world's only portable, battery-powered MR logging tool. Its small diameter and ultra-short echo spacing are deal for measuring water content in shallow soils and sediments. The optional Geoprobe® (JP140G) has a narrower diameter and can be deployed using Geoprobe's direct push profiling systems.
