Record Surge in Javelin Orders:

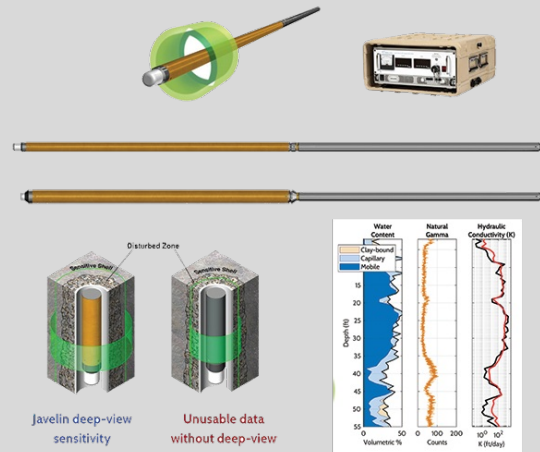

Vista Clara has delivered 11 Javelin Systems across six continents

Driven by the recently released [Javelin Slim](#), Vista Clara has seen record levels of new orders for the entire Javelin family of borehole NMR logging tools during the first three quarters of 2021. A key advantage of the Javelin Slim is the 2.38 in (60mm) diameter that accommodates smaller boreholes.

The Javelin popularity is being driven by many factors including:

- Multiple diameters of investigation for high-resolution logging beyond drill disturbance
- Simplified, compact downhole electronics
- Flexibility for PVC-cased or open holes
- Integrated turnkey software for in field data acquisition and analysis
- Unmatched global support and virtual training capabilities
